Presto! FORMS

Presto! Forms

The Most Convenient Tool for Creating and Filling out Forms

Presto! Forms, combining scanning and word processing, is especially designed for users to scan and edit pre-printed forms. Its powerful recognition engine automatically detects the existence of lines and identifies the beginning of fields and checkboxes as users define. With it, you can scan and fill in any form, edit each of the fields, and print it out or fax it. Presto! Forms is an easy-to-use program for filling out health care-, tax-, medical-, insurance-, real estate, government forms and more.

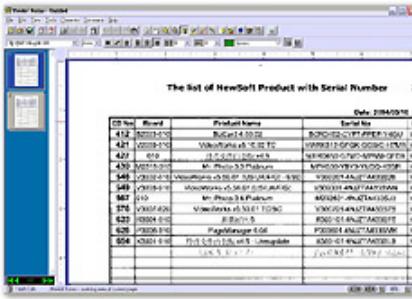

Presto! Forms can keep multiple page forms in one file, and allows you to add sticky notes, draw lines and stamp impressions onto the image file. You can print out the blank form, a completed form, or only the text onto an original form. Presto! Forms can also read pre-scanned image files such as PFS, BMP, PCX, and TIF file formats.

Filling Out Forms Is Now Even Easier!

The process of filling out awkward forms neatly and legibly with dozens of fields can be a frustrating experience to most people. Usually, a single mistake can mean you have to start all over again, too.

But with Presto! Forms, this process is no longer something to dread. Presto! Forms' strength is recognizing fields within an array of forms and turning them into editable entries.

And, once you have gotten forms from your files on your hard disk, CD or after scanning them, you can begin managing, editing, annotating, even faxing your filled-in documents.
