

Presto!  
**Mr. Photo**  
Platinum Edition

[PRODUCTS](#)[E-STORE](#)[REGISTRATION](#)[TECH SUPPORT](#)[TUTORIALS](#)[ABOUT NEWSOFT](#)

If you are serious about taking pictures and making the most of your digital photo and video equipment, Presto! Mr. Photo Platinum is the only solution that you need. With the **6-in-one memory card reader** that now comes with Mr. Photo you can very quickly access your memory cards as if they were another hard drive - saving time and the need to turn your camera on.

You can even import directly from external image and video devices such as a Digital Camera or DV Camcorder. This means you can choose the images that you want from those devices and download just them. If you're like most, you can end up with hundreds of digital images after just a day out with your digital camera.

This makes management a difficult task for most but not for Mr. Photo Platinum, which is equipped with an open architecture environment to allow you to view images, videos and listen to sound in any directory on any storage device.

Mr. Photo Platinum does more than just keep your digital images in order it imports images, video and even sound files. Then with built-in creativity functions you can make your files into something to share with family and friends. To do that Mr. Photo Platinum even comes with a built-in DVD/VCD authoring tool called Presto! DVD Composer.

If you feel creative, but don't feel that you are a very creative person you can make the most of the creativity functions that will turn your photos into slideshows, birthday or Christmas cards and even a DVD.
